

Temperature sensor Metos SmartKitchen KE

Product information

SKU	4008006
Productnaam	Temperature sensor Metos SmartKitchen KE
Afmetingen	13 x 3,5 x 7,5 mm
Gewicht	0,500 kg

Description

With the help of Metos SmartKitchen KE you can monitor the temperature data of different measuring points and destinations in real-time through an internet connection. In the case that the temperature deviates from the set temperature range, an alarm signal can be directed via text message to a mobile device or an email inbox. The reportage enables a comprehensive information retrieval system, as well as a clear and easy way to transfer data to other operators.

The Temperature Sensor Metos SmartKitchen KE suits Metos Proveno 2G and 3G, Metos Viking, and Metos Culino -cooking kettles, which have HACCP readiness. In addition to the temperature data, the sensor provides on/off -data for warming up, cooling down and mixing. You can order the sensor with the cooking kettle or it can be installed to a Metos cooking kettle later by Metos Service.

The data that is stored into the sensor is transferred in real-time via Bluetooth to a mobile device or a tablet, which is equipped with the SmartKitchen -app. The data is available to be browsed, analysed and

shared with all browsers through the Metos SmartKitchen -online service, wherever and whenever, and managed with the help of the Metos SmartKitchen -kitchen license. The Metos SmartKitchen -kitchen license, together with the Metos SmartKitchen -online service, provides you with daily, monthly, or yearly reports, which enables the creating and editing of checklists when needed, changing the alarm information's control settings, changing the names of the measuring devices and the calibration values, as well as giving reading permissions. In the online service, the digital HACCP -archive is constantly updated.

The sensors' Bluetooth® Smart -connection range is max. 15 metres. One mobile device/tablet can transfer the data of 30 sensors, SmartKitchen Connector can transfer the data of over 100 sensors. The mobile device/tablet should be equipped with an Android 4.4 (or newer) software.

The Temperature Sensor Metos SmartKitchen KE is affordable to purchase and manage, as well as easy to install and use! You only need the temperature sensor, a mobile device/tablet, equipped with a SIM-card, a mobile data connection, the SmartKitchen -app and the SmartKitchen

- kitchen license.
